

Companies that **DO TEST** on Animals

(updated 6 April 2026)

The following companies manufacture products that are tested on animals. Listed in parentheses is the parent company. For a complete list of brands manufactured by the company on this list, please visit the company's website.

Companies on this list may also manufacture brands without animal testing. These companies have not, however, eliminated animal testing from their entire supply chain.

While many companies do not test on animals for North American or European markets, they may sell in a country where animal testing is required by law, therefore their products cannot be considered cruelty-free.
